1. What is Bitcoin?

- Bitcoin is a private digital currency.
- There are 19.8MM Bitcoin outstanding.
- The Bitcoin market capitalization is \$1.9 trillion.
- The price is extremely volatile.

2. How Many Americans Own Bitcoin?

- As of 2023, approximately 14.6% of Americans owned crypto.
- Approximately six in 10 Americans (63%) say they have little to no confidence that current ways to invest in, trade, or use cryptocurrencies are reliable and safe.

Majority of Americans who've ever used crypto still have it, but it varies by household income

Among U.S. adults who say they *have ever invested in, traded or used cryptocurrency*, % who ...

Note: Family income tiers are based on adjusted 2022 earnings. Those who did not give an answer are not shown.

3. How Many Bitcoin Can Be Created?

- Although Bitcoin is promoted as a currency that cannot be inflated, there is no firm limit on the creation of Bitcoin.

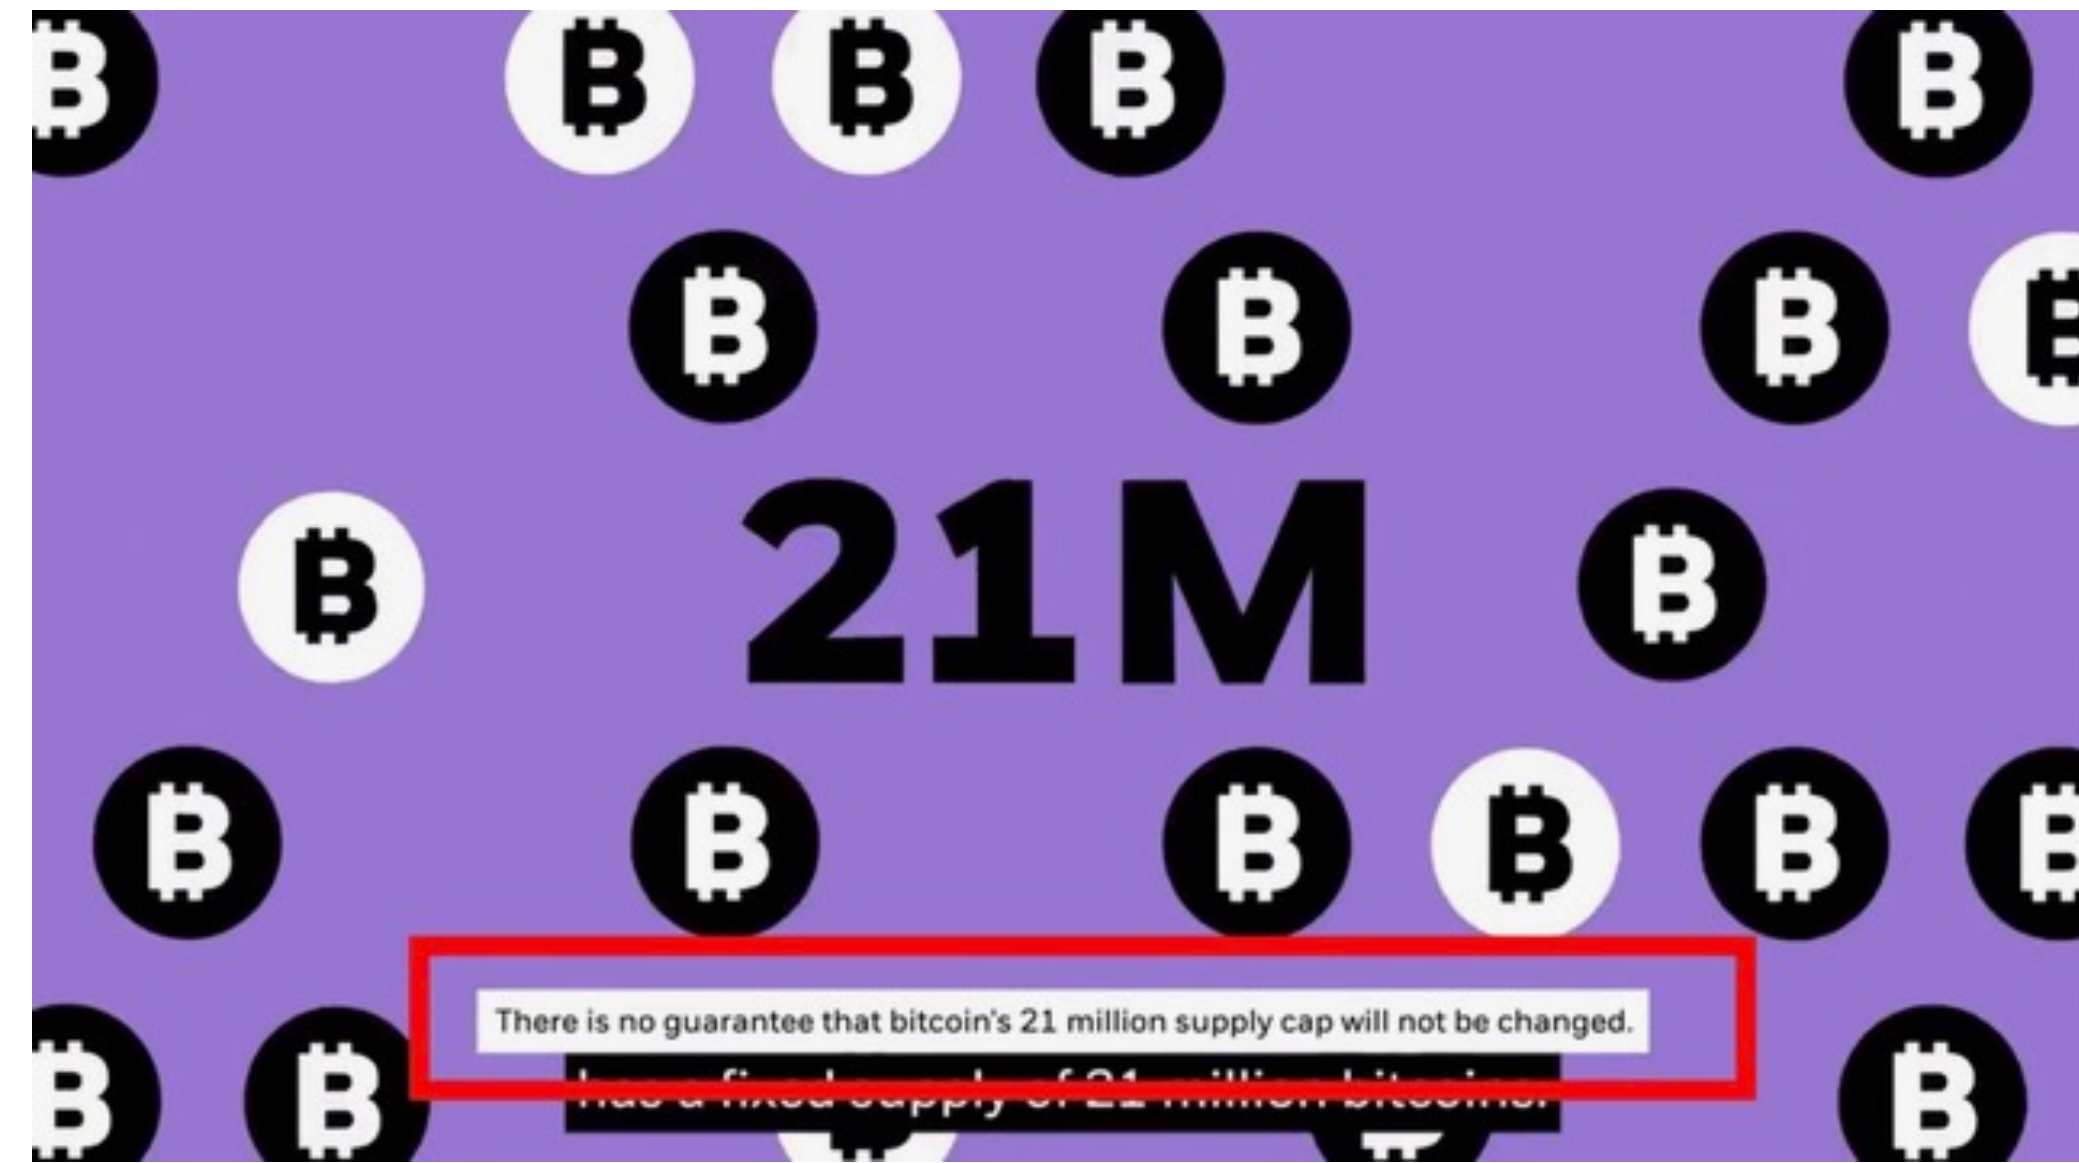

“How the hell do you know that it’s going to stop at 21 [million.] I’ve never met one person who told me that they know for a fact.” ~ Jamie Dimon at the World Economic Forum in Davos

- <https://live.solari.com/w/mafzyrfM4ZWXwQjMTRECSZ>

4. Who Maintains the Bitcoin Blockchain?

- The blockchain is maintained by Bitcoin miners that depend on created Bitcoin and transaction fees to cover expenses.
- Because the blockchain infrastructure is very energy and environmentally expensive, the infrastructure may not be sustainable.
- The Bitcoin blockchain consumes more energy than many countries consume.

4. Who Maintains the Bitcoin Blockchain?

- The blockchain is maintained by Bitcoin miners that depend on created Bitcoin and transaction fees to cover expenses.
- Because the blockchain infrastructure is very energy and environmentally expensive, the infrastructure may not be sustainable.
- The Bitcoin blockchain consumes more energy than many countries consume.

- *Granbury Residents Sue Local Bitcoin Mine over Health Threatening Noise Pollution (Earthjustice)*

5. Who Owns Bitcoin?

- Significant amounts of Bitcoin are owned by early investors. According to MIT:

Bitcoin: Who owns it, who mines it, who's breaking the law

- *“The authors found that participation in Bitcoin is skewed toward the elite. Their research showed that at the end of 2020, there were 1,000 ‘clusters’ controlling 2 million bitcoins.*
- *The authors clustered addresses so that all addresses that sent bitcoins in any single transaction were deemed to belong to the same entity. [Author] Schoar said this often happens for the sole purpose of obfuscating the origin of funds. In addition, the top 10,000 clusters owned more than 4 million bitcoins—about a quarter of all outstanding bitcoins. This has important implications for market stability.*
- *‘Somebody who can easily spend a hundred million dollars worth of Bitcoin and sell it or buy it can have a massive price impact in the market,’ Schoar said. ‘That’s typically a situation we don’t like, because it means as a regular retail investor, you might suddenly find yourself \times percent down because of massive volatility, which might be created by a few large investors randomly deciding to sell some of their holdings.’*
[MIT, 2021]

6. How Has Bitcoin Been Marketed?

- Bitcoin was originally designed to be a global transaction system with a practical purpose.
- It has been converted into a digital asset that has relatively high transaction fees and is illiquid compared to other digital payment systems.
- Bitcoin has been converted into a speculative asset managed to maximize trading profits for early investors.

6. How Has Bitcoin Been Marketed?

- In early 2023, economists at the Bank for International Settlements (BIS) estimated that most retail investors in Bitcoin had not yet achieved a positive return on their investment.
- According to the FBI Cryptocurrency Fraud Report 2023, *“While the number of cryptocurrency-related complaints represents only about 10 percent of the total number of financial fraud complaints, the losses associated with these complaints account for almost 50 percent of the total losses.”*
(\$5.6 billion in 2023)

7. Who Is Proposing the Creation of Bitcoin Strategic Reserves?

- Proposals for the creation of federal and state Bitcoin reserves were floated during the 2024 U.S. presidential campaign as the crypto industry became the campaign's largest corporate donor.

Top 5 contributors to the 2024 election's crypto PAC triad

Fairshake, Protect Progress, and Defend American Jobs have spent over \$133 million to bolster congressional and presidential campaigns in the 2024 cycle.

	Organization Name	Individual	Organization
1	Ripple Labs Inc	\$0	\$46,500,000
2	Coinbase	\$0	\$46,499,995
3	Andreessen Horowitz	\$45,250,000	\$0
4	Jump Crypto	\$0	\$15,000,000
5	Winklevoss Capital Management	\$5,000,000	\$0

8. Cui Bono? The Bailout of the Big Boys

- Large early investors need significant new purchasers to keep the speculation going—and to support liquidity for their exit before the speculative mania is over or the infrastructure becomes unsustainable.
- A Bitcoin bailout does not provide an inflation hedge for government; it is a reverse Robin Hood—taking from working people to bail out the big boys.
- **If governments can afford to bail out Bitcoin billionaires, they can afford instead to cut taxes and/or provide excellent government services that support productive activities.**
- Citizens should be free to speculate in the Bitcoin market or not as they choose rather than be taxed to bail out billionaires and maintain speculative bubbles.
