

Vaxxed: From Cover-Up To Catastrophe

Transcript

00:00:07 - 00:00:13

In California, the worst measles outbreak in 15 years is spreading. The virus is roaring back into

00:00:13 - 00:00:19

the headlines tonight. An outbreak somehow traced to someone who had probably caught measles abroad

00:00:19 - 00:00:25

visited Disneyland and may have sneezed. Measles on the march. America. This outbreak is showing no

00:00:25 - 00:00:32

signs of letting up. There are already more cases this year than the number tripled to 644 measles

00:00:32 - 00:00:37

cases reported in 27 states. I mean, is this all basically because of the anti-vaccination movement

00:00:37 - 00:00:43

because parents aren't vaccinating their kids? Yeah, you know, I think so. A bill that would ban

00:00:43 - 00:00:48

exemptions from childhood vaccines is advancing through the California legislature. We are authoring

00:00:48 - 00:00:52

legislation that will abolish the personal belief exemption. I think you're starting to see why it

00:00:52 - 00:00:56

is that mandates are so important. There has been some inaccurate information circulating

00:00:56 - 00:01:01

circulating about vaccines, mostly stemming from a British study linking vaccines to autism. We

00:01:01 - 00:01:06

still continue to hear the vaccine caused autism. Even though that's been debunked repeatedly and

00:01:06 - 00:01:13

thoroughly debunked, you may have heard vaccination causes autism in 1 out of 110 children. Fuck

00:01:13 - 00:01:18

that. Total bullshit. It doesn't. The bill requiring children to be vaccinated has passed with

00:01:18 - 00:01:24

bipartisan support. Every child must meet immunization standards before joining public schools,

00:01:24 - 00:01:30

private schools, and daycares. I would strongly encourage everybody to look at the science, look at

00:01:30 - 00:01:35

the facts. CDC, the Center for Disease Control can give you good information. Get your children

00:01:35 - 00:01:36

vaccinated.

00:01:43 - 00:01:48

I have waited a long time to tell my story, and I want to tell it truthfully.

00:01:52 - 00:01:57

I was involved in deceiving millions of taxpayers regarding the potential negative side effects of

00:01:57 - 00:01:58

vaccines.

00:02:01 - 00:02:04

We lied about the scientific findings.

00:02:06 - 00:02:16

The CDC can no longer be trusted to do vaccine safety work. Can't be trusted to be transparent. The

00:02:16 - 00:02:20

CDC can't be trusted to police itself.

00:02:22 - 00:02:31

Just a few thoughts. William W. Thompson, senior scientist, US Centers for Disease Control and

00:02:31 - 00:02:31

Prevention.

00:02:58 - 00:03:04

Hello. I was sitting at my desk where I teach at Simpson University. My phone rings and it's Dr.

00:03:05 - 00:03:11

William Thompson. Brian, you and I don't know each other very well. I don't know how this is all

00:03:11 - 00:03:20

going to play out. You have a son with autism, and I have great shame now when I meet families with

00:03:20 - 00:03:30

kids with autism because I, I have been part of the problem. My son Steven was born in February of

00:03:30 - 00:03:35

1998. Steve, what does the cow say? We tweet

00:03:40 - 00:03:47

2 weeks after his 15 month vaccines, then he lost all language. He lost all eye contact. You'd pick

00:03:47 - 00:03:54

him up and he would just hang limp. This is a time where CDC was just starting to do these studies

00:03:54 - 00:04:03

on vaccines and autism. As a scientist, I have over 60 technical and scientific publications and

00:04:03 - 00:04:11

major international scientific journals, and I was contacting the CDC and was deeply critical of

00:04:11 - 00:04:16

their studies and so the CDC decided that the scientist who was going to interface with me at that

00:04:16 - 00:04:22

time was Dr. William Thompson. Because I was on his back, because he didn't like what I was saying

00:04:22 - 00:04:30

about the statistics, I received a letter from a CDC attorney in 2004 saying that I was no longer

00:04:30 - 00:04:41

permitted to contact the CDC. Fast forwarding to 2014, Thompson said to me, Brian, if you listen to

00:04:41 - 00:04:49

me and if you do what I tell you to do, I can guarantee you will be able to access a treasure trove

00:04:49 - 00:04:52

of data, and I would like to guide you through these steps.

00:05:00 - 00:05:08

So I want to be a research. I want to be valuable to you. I want you to have someone in the system

00:05:08 - 00:05:18

for years. I had been trying to crack this edifice of the CDC and just getting little glimpses of

00:05:18 - 00:05:28

what was not right. The CDC has put the research 10 years behind. Because the CDC has not been

00:05:28 - 00:05:38

transparent, we've missed 10 years of research because the CDC is so paralyzed right now by anything

00:05:38 - 00:05:39

related to autism.

00:05:42 - 00:05:51

I am a licensed clinical psychologist and a board certified behavior analyst. In 1978, um, I want to

00:05:51 - 00:05:59

say the prevalence of autism was about 1 in 15,000 children. It was a very rare disorder. I was

00:05:59 - 00:06:05

working at a clinic at UCLA, which was pretty much the only known center for treating children with

00:06:05 - 00:06:12

autism, and we had maybe 6 to 10 children who we were. Working with. Somewhere around the early 90s,

00:06:12 - 00:06:20

shortly after I opened CARD, the growth of autism has been so high and so rapid that I've never felt

00:06:20 - 00:06:27

like I could ever catch up anymore. From an official diagnostic perspective, the way that we define

00:06:27 - 00:06:34

autism, we were looking at deficits in two areas. The first is social communication and social

00:06:34 - 00:06:44

interaction. And in that area, we require 3 specific symptoms to be present symptoms such as no

00:06:44 - 00:06:51

social emotional reciprocity, no nonverbal communication, that means eye contact, for instance, or

00:06:51 - 00:06:59

no development of relationships. The second required area of deficit is the presence of stereotypic

00:06:59 - 00:07:08

repetitive, restricted behaviors, and these are things like hand flapping, body rocking, insistence

00:07:08 - 00:07:17

on routines being the same. One of the new additions is the presence of a sensory dysregulation. If

00:07:17 - 00:07:24

a child has an inability to sense things correctly, not necessarily hearing things the way we do,

00:07:24 - 00:07:28

that could be classified as a symptom of autism.

00:07:31 - 00:07:37

So if you have 5 symptoms, 2 in the area of repetitive behaviors, and 3 in the area of social

00:07:37 - 00:07:43

communication deficit, then you will get a classification of what's called autism spectrum disorder,

00:07:43 - 00:07:44

ASD.

00:07:48 - 00:07:53

We begin though, as always, keeping them honest. Breaking news tonight just hours ago, the British

00:07:53 - 00:07:58

Medical Journal BMJ did something extremely rare for a scientific journal. It accused a researcher,

00:07:58 - 00:08:05

Andrew Wakefield, of outright fraud. I got a call on the 19th of May 1995 from a mother telling me

00:08:05 - 00:08:13

the story of her child, his regression into autism following a vaccine. And I said How can I help

00:08:13 - 00:08:18

you? I know nothing about autism. You've come through the wrong number. And she said, no, doctor, my

00:08:18 - 00:08:24

child has terrible gastrointestinal issues and no one will take them seriously. I was an academic

00:08:24 - 00:08:30

gastroenterologist doing research with a particular interest in Crohn's disease and ulcerative

00:08:30 - 00:08:35

colitis, inflammatory bowel disease. I knew nothing whatsoever about autism. When I was at medical

00:08:35 - 00:08:42

school, it was so rare we weren't taught about it. We heard a succession of stories which were very,

00:08:42 - 00:08:48

very similar. Medicine is about pattern recognition, and there was a clear pattern emerging, so we

00:08:49 - 00:08:56

decided a group of us, including the world's leading pediatric gastroenterologists at the time led

00:08:56 - 00:09:01

by Professor John Walker Smith, decided that these children merited thorough investigation. Well, Dr.

00:09:02 - 00:09:08

Wakefield has been shown used absolutely fraudulent data. He created a fake paper. The journal

00:09:08 - 00:09:14

allowed it to run. All the other studies were done showed no connection whatsoever again and again

00:09:14 - 00:09:20

and again, so it's an absolute lie that has killed thousands of kids. And what we discovered and

00:09:20 - 00:09:26

reported for the first time was this link between what appeared to be a novel type of intestinal

00:09:26 - 00:09:33

inflammation and autistic regression in previously developmentally normal children. And among those,

00:09:33 - 00:09:39

the majority had regressed into autism according to their parents following. The measles, mumps

00:09:39 - 00:09:46

rubella vaccine. It wasn't our place to censor their story because it may be uncomfortable for

00:09:46 - 00:09:52

public health. Our job was to report that story accurately in order that it might lead to further

00:09:52 - 00:09:59

investigation, and the paper explicitly said, This paper does not prove an association between MMR

00:09:59 - 00:10:06

vaccine and the syndrome described. More work is needed to resolve this issue. That was the

00:10:06 - 00:10:12

conclusion of the paper. As an investigative medical journalist, I've spent the last 7 years working

00:10:12 - 00:10:17

on one of the best medical talk shows in the world. We know in medicine that there have been many,

00:10:17 - 00:10:22

many studies proving that vaccines do not cause autism, but the problem I have always had with that

00:10:23 - 00:10:30

is thousands and thousands of parents all telling the same story. My child got a vaccine, usually

00:10:30 - 00:10:35

the MMR vaccine, and then that night or the next day broke out in a fever. And then when they came

00:10:35 - 00:10:41

out of the fever, lost speech, lost the ability to walk, basically regressed into what we know as

00:10:41 - 00:10:47

autism and never came back. Doctors used to be told to listen to the patient. That was the

00:10:47 - 00:10:52

cornerstone of medicine as we know it, but something's changed recently where the patient doesn't

00:10:52 - 00:10:57

know what they're talking about, and these parents with their story of their children have just been

00:10:57 - 00:11:03

written off as though they have no idea what's really going on with their child. I have 2 kids. And

00:11:03 - 00:11:09

anyone that has children knows that when we first have babies, we are overly sensitive to every

00:11:09 - 00:11:16

little hiccup, every cough, every sniffle. So to say that a parent was just unaware that their child

00:11:16 - 00:11:21

had issues and suddenly they realized that uh one year later that oh they have autism that doesn't

00:11:21 - 00:11:27

make sense to me and so I wanted to look into this story and find out what is this disconnect

00:11:28 - 00:11:31

between medicine, science, and real parents.

00:11:36 - 00:11:43

I couldn't wait to be a mum. I remember specifically, before we even got married, talking about how

00:11:43 - 00:11:49

important children would be in our lives. I wanted a daughter first, and I wanted a son, and we were

00:11:49 - 00:11:54

planning on having 4 children. We were going to be the most perfect parents that we could be. Bella

00:11:54 - 00:12:02

was born and um. That was a wonderful experience. Bella was just this angelic, perfect child. She'd

00:12:02 - 00:12:08

hit all her milestones. I got pregnant with Billy quite quickly.

00:12:10 - 00:12:16

Bela, say hello to Billy. We've now got a beautiful girl and a beautiful boy. Life was just amazing.

00:12:16 - 00:12:23

So at 24, and 6 months, Billy had his normal baby vaccines. A little bit snively, chesty, coldy

00:12:23 - 00:12:29

after maybe the last one. So me in my perfect mother mode, rushed to the doctor. I mean, is he OK?

00:12:29 - 00:12:33

Do I need to give him anything? Yes, you need to give him antibiotics just to make sure there's not

00:12:33 - 00:12:39

an infection in there. It didn't clear up. Rushing back to the doctor, and we need some more

00:12:39 - 00:12:43

antibiotics. Let's just keep this going in him. And I remember my mother calling me out my mother's

00:12:43 - 00:12:47

sort of homeopathic hippie and calling up and saying, what are you doing? You're chucking loads of

00:12:47 - 00:12:52

antibiotics down your son for what? And I'm saying to her, Mum, with all due respect, you're an

00:12:52 - 00:12:59

artist. And they're doctors, so they know best. He was due his MMR vaccination at 12 months. So the

00:12:59 - 00:13:04

morning, exactly to the day, my friend, she said to me, Listen, I've heard that there may be a

00:13:04 - 00:13:09

problem with this vaccine we're about to take Billy for the MMR, and I said, Lizzy, you crazy? What

00:13:09 - 00:13:15

is the matter with you? If there was a problem? With vaccination, it would be headline news. The

00:13:15 - 00:13:20

doctor would be calling me up saying, do not bother coming in, this is not a safe vaccine. None of

00:13:20 - 00:13:25

that is happening. You're being negative, you're being careless, and you're listening to what some

00:13:25 - 00:13:30

rumor that you heard somewhere. Billy could become deaf if I don't take him in now and get him the

00:13:30 - 00:13:30

San.

00:13:34 - 00:13:39

You know, most of the evidence linking measles with autism is kind of settled down, and most of the

00:13:39 - 00:13:44

doctors and scientists agree that it probably isn't the major cause. I've been working in pediatrics

00:13:44 - 00:13:52

for almost 20 years. I think most pediatricians view vaccines as they're the number one thing they

00:13:52 - 00:13:54

do for kids. OK

00:13:58 - 00:14:05

there we go. All right, OK, I'm young enough to not remember the days of kids in an iron lung

00:14:06 - 00:14:10

because they were battling polio. You know, polio has essentially been eradicated from this country.

00:14:11 - 00:14:17

In '98, the, the Wakefield study came out. My son had just been born. That study kind of pointed a

00:14:17 - 00:14:25

finger at the MMR. As a parent, I was scared to give the MMR to my son. Um, and as a matter of fact,

00:14:25 - 00:14:33

we I didn't give it to him on time because I wanted to see. I wanted to see. What additional studies

00:14:33 - 00:14:39

would show and over time, additional studies did show that no, no, it's safe. And so he did get the,

00:14:39 - 00:14:43

the, the vaccine, you know, if everybody stopped vaccinating.

00:14:46 - 00:14:48

We'd be going back to the Dark Ages.

00:14:59 - 00:15:07

When a CDC scientist who'd been there at that time 17 years tells you this is how you access data,

00:15:08 - 00:15:13

it didn't take me very long to realize, oh, I better do what he says because he knows what he's

00:15:13 - 00:15:19

talking about. I just want to tell you one thing right now I'm sitting in a very pretty position in

00:15:19 - 00:15:23

terms of providing you a lot of information. He asked me what, what data sets are you going to

00:15:23 - 00:15:27

request, and I said, Well, I'm going to request two of the studies that you've done on TameraSol,

00:15:27 - 00:15:33

the mercury containing preservative. That's used in some of the vaccines and he said, Well, that's

00:15:33 - 00:15:40

fine, but I want you to request the MMR data set first. And this is the study by Frank DeStefano and

00:15:40 - 00:15:47

his colleagues in 2004. It was the one study where we could end up creating a mess while the CDC

00:15:47 - 00:15:53

tried to, you know, tried to sort out something they couldn't understand. The day Billy got the MMR

00:15:53 - 00:15:59

was a living nightmare, the worst day of my life, to be honest with you. I came in and I saw. Him

00:15:59 - 00:16:07

lying in his cot, listless, he started this uncontrollable shaking, uncontrollable shaking. Imagine

00:16:07 - 00:16:15

coming out of a frozen pond. His eyes were doing this and he was shaking like this. And I remember

00:16:15 - 00:16:21

she grasped him and held him really tight to her chest. There's immediate fear in John and there's

00:16:21 - 00:16:26

immediate mummy, this is not gonna happen. I don't know what is wrong with you, but this is not

00:16:26 - 00:16:32

gonna happen. And we get to hospital, we rush him in, Doctors are coming in and looking at him, and

00:16:32 - 00:16:39

that's when they said he's had a reaction, he's had a seizure, he's, this is normal, this is common.

00:16:39 - 00:16:46

For many, many children who have this, this vaccination, it's absolutely OK, he's going to be fine.

00:16:47 - 00:16:53

Nobody ever told me that there would be any side effects of any of the vaccinations my children had.

00:17:01 - 00:17:07

Following his febrile convulsion that he had the same day of the MMR, we were told to take him home.

00:17:07 - 00:17:12

He slept in the bed with us for the night. He seemed, he seemed just very, very sleepy. In fact he

00:17:12 - 00:17:16

didn't really ever wake up to the Billy that we had before.

00:17:20 - 00:17:27

For me, it became really necessary to start looking at what types of medical issues are these

00:17:27 - 00:17:32

children going through. What are the other factors that have affected them, that have brought them

00:17:32 - 00:17:38

to this level of symptomology that we call autism. This is now probably the mid 90s. I came to

00:17:38 - 00:17:46

notice that there was a, a very high use of antibiotics amongst these children, but B. Became pretty

00:17:46 - 00:17:55

interesting was seeing the number of families who were reporting that their child had a regressive

00:17:55 - 00:18:02

type of behavior occur right after their vaccinations. A lot of these parents were showing me

00:18:02 - 00:18:10

footage of their children who had been completely developing normally until 18 months, and then all

00:18:10 - 00:18:18

of a sudden. Post vaccination had developed incredible regression. Children who had speech anywhere

00:18:18 - 00:18:24

close to 50 to 100 words and had completely lost all of their words. Children who were extremely

00:18:24 - 00:18:30

attached and interactive with their parents and had suddenly become isolated, no longer responding

00:18:30 - 00:18:36

to their own name. This was all happening right after their MMR vaccines.

00:18:46 - 00:18:54

My oldest son Ian was born normal, uh, developing normally. He was this beautiful boy and we ended

00:18:54 - 00:19:00

up at our 12 month visit, which is 1 year. Then they gave him multiple vaccines at once, and within

00:19:00 - 00:19:10

7 days he had a 104 fever and a rash all over his body. He had previously been noted and um. In our

00:19:10 - 00:19:17

videos, home videos that he was walking and actually running at that 0.7 days after the vaccine, he

00:19:17 - 00:19:18

was no longer able to do that.

00:19:40 - 00:19:44

He was falling down. He became a really sick, sick little boy.

00:19:47 - 00:19:55

So the question for those of us investigating autism is age of exposure to MMR a risk for autism?

00:19:55 - 00:19:59

And in order to understand why that might be, you have to understand something of the history of MMR

00:19:59 - 00:20:08

vaccine. In 1987, there was an MMR vaccine that was being used in Canada, produced by SmithKline

00:20:08 - 00:20:15

Beecham. And that vaccine caused meningitis. It was recognized quickly and that vaccine was

00:20:15 - 00:20:22

withdrawn in Canada. However, in the same month that it was withdrawn in Ontario, it was licensed in

00:20:22 - 00:20:29

the UK. The name was simply changed from Trivirex to loosery. In the UK it was used for 4 years and

00:20:29 - 00:20:34

likewise, it caused meningitis and had to be rapidly withdrawn. There was a public outcry. There was

00:20:34 - 00:20:42

an acute loss of confidence by the public in vaccine policymakers, and the vaccine should at that

00:20:42 - 00:20:49

point have been destroyed. It wasn't. It was then shipped to developing countries like Brazil, where

00:20:49 - 00:20:56

it was used in a mass vaccination campaign, and there was an epidemic of meningitis, which was

00:20:56 - 00:21:04

entirely predictable. Now scientists studied that epidemic and what they found is that the risk for

00:21:04 - 00:21:11

meningitis was associated with age of exposure. The younger you got the MMR vaccine, and the greater

00:21:11 - 00:21:18

the risk of meningitis. For people like me investigating autism, the question was, is there a

00:21:18 - 00:21:27

similar risk in autism? Is age of exposure to MMR a risk for autism just as it was for meningitis?

00:21:28 - 00:21:36

We shared with the US Congress and the CDC the hypothesis. The story as told to us, which we have an

00:21:36 - 00:21:42

obligation to report, is that the majority of children regressed following a period of normal

00:21:42 - 00:21:48

development in the face of MMR vaccination. That does not mean it is the cause of the disease. The

00:21:48 - 00:21:53

Institute of Medicine is a body of scientists and physicians that review the available data on

00:21:53 - 00:21:59

vaccine safety. And then advise our government on vaccine research policy. Well, because Andy

00:21:59 - 00:22:06

Wakefield had put forth this theory that the age at which you received the MMR may increase your

00:22:06 - 00:22:13

risk of autism, the IOM looked to the CDC to do that very study. It was a study about timing. Does

00:22:13 - 00:22:20

the earlier you receive the MMR vaccine increase the risk of autism? When we talk about the MMR

00:22:20 - 00:22:27

study, nobody had ever requested those data because it was a big secret that you could do it.

00:22:27 - 00:22:34

Thomson told me to email such and such a person, and then on the inside I also found out that one of

00:22:34 - 00:22:40

the people preparing these data sets for me was Bill Thompson. They don't really want people to know

00:22:40 - 00:22:46

that this data exists again, you know, I just can't believe we actually got you that. Thompson

00:22:46 - 00:22:51

couldn't send these documents directly to Brian Hooker because that would have been illegal. What

00:22:51 - 00:22:59

Thomson identified was a legal loophole that is referred to as a citizen's request that allowed

00:22:59 - 00:23:04

Thomson to deliver to Brian Hooker potentially classified information in a legal way.

00:23:09 - 00:23:15

You get checked in England with your babies at certain times He by health visitors. So at 9 months.

00:23:16 - 00:23:24

Billy had his full blown check and it says no parental concerns, baby laughing, babbling, talking,

00:23:24 - 00:23:32

so we passed that with flying colors. 18 months is when they next come in. And by this time, we know

00:23:32 - 00:23:39

there's something seriously wrong with Billy. Probably within 5 or 6 days, the first signs really

00:23:39 - 00:23:46

was this vacancy. He wasn't the same smiley little baby that he was before. He had a blank

00:23:46 - 00:23:54

expression. Then the diarrhea kicked in. His tummy started to get bigger and bigger, bloated, rock

00:23:54 - 00:24:01

hard bloated tummy. He would start to walk on tiptoes, his hair fell out in this dreadful high

00:24:01 - 00:24:09

pitched scream, sort of whiny scream developed from him and then. Came the head bang, the constant

00:24:09 - 00:24:15

banging against his crib, the constant banging against the foot or a wall or anything that he could

00:24:15 - 00:24:21

find to bang his head on, he would thrash it and thrash it. John and I would lie in bed at night

00:24:21 - 00:24:24

just listening to this thud thud thud.

00:24:27 - 00:24:32

Thud. There's nothing, he's now not even noticing his sister who used to play with. John comes

00:24:32 - 00:24:38

through the front door after work, no recognition that we were his parents or this child even

00:24:38 - 00:24:40

belonged to us. Nothing, nothing, go on.

00:24:47 - 00:24:54

I mean, that was the time where. A boy changed from what he was to.

00:24:57 - 00:24:59

A real

00:25:01 - 00:25:11

Tragic, tragic case of. A child who regressed into this autistic state and lost everything.

00:25:13 - 00:25:15

Lost everything.

00:25:20 - 00:25:27

The CDC, the way that they do research studies is very reactionary. They look at something that's

00:25:27 - 00:25:34

creating a press and creating a buzz that could actually lower vaccination rates, and that's what

00:25:34 - 00:25:41

they study. They don't study vaccines proactively. So if Andy had never done his original study,

00:25:41 - 00:25:46

gotten that published in The Lancet, would have never created the uproar that rightfully it should

00:25:46 - 00:25:50

have created, then the CDC would have never studied this.

00:25:53 - 00:25:57

The press conference for the Lancet paper was called by the Dean of the medical school who was the

00:25:57 - 00:26:03

chairman of the Media committee. Association between MMR.

00:26:05 - 00:26:05

I

00:26:09 - 00:26:16

had done an extensive research into measles vaccine safety and MMR vaccine safety in the

00:26:16 - 00:26:22

pre-licensing phase. In other words, what safety studies had been done before these vaccines were

00:26:22 - 00:26:30

put onto the market and into children. The 250 page report was compiled by me, showing that the

00:26:30 - 00:26:37

vaccine safety studies for MMR in particular were. Lamentable. They were lamentable. There are many,

00:26:37 - 00:26:43

many assumptions have been made about the safety of this vaccine. And there had been problems which

00:26:43 - 00:26:52

had been airbrushed. So I wrote to my colleagues and the dean, and I said going forward there are

00:26:52 - 00:26:57

going to be questions about what parents should do next. I cannot in due conscience support the

00:26:57 - 00:27:03

continued use of the MMR vaccine, having done this research. I said I will continue to vigorously

00:27:03 - 00:27:09

support the use of the single vaccine, but can no longer support the use of the triple MMR vaccine.

00:27:10 - 00:27:16

So the dean, as chairman of that committee, had three choices. He could have Not had a press

00:27:16 - 00:27:23

conference. He could have banned me from the press conference or when the question came up as

00:27:23 - 00:27:29

inevitably it would. What do parents do next about vaccinating their children? He knew what my

00:27:29 - 00:27:35

response would be. He could deflect the question to someone else. When the question came up on the

00:27:35 - 00:27:37

day, he directed it straight to me.

00:27:40 - 00:27:40

All I recommended

00:27:50 - 00:27:56

at that press conference was that parents opt for the use of the single vaccines, single measles,

00:27:57 - 00:28:04

single mumps, single rubella, until the issue had been resolved scientifically. What happened when I

00:28:04 - 00:28:10

made that recommendation, unilateral decisions were made by the government in the UK to withdraw the

00:28:10 - 00:28:17

importation license for the single vaccines. Merck opting in the US to cease the production of the

00:28:17 - 00:28:22

single vaccines, giving parents no option. I said to a senior representative of the Department of

00:28:22 - 00:28:28

Health, why, if your objective is to protect children against serious infectious disease, why would

00:28:28 - 00:28:34

you take away the option of how parents do that? And she said because if we allowed parents the

00:28:34 - 00:28:41

choice of single vaccines, it would destroy our MMR program. In other words, the concern. It was for

00:28:41 - 00:28:45

the protection of the program over and above the protection of children.

00:28:49 - 00:28:56

No one's career has ever been advanced in the medical industrial complex by being outwardly and

00:28:56 - 00:29:03

openly critical of the vaccine industry. I'm Mark Laxel, a father of a daughter. Diagnosed with

00:29:03 - 00:29:10

autism back in 1998, and I've written two books that have come out of the autism movement, have been

00:29:10 - 00:29:17

projected into autism advocacy ever since. Michael was born typical. Everything was fine, was

00:29:17 - 00:29:22

developing normally through her first birthday. We have vivid memories of, uh, you know, early

00:29:22 - 00:29:30

language, joint attention, lots of play. She was adorable, beautiful, cute. Uh, and then somewhere

00:29:30 - 00:29:37

in the months after she began to slip away and she lost language and she began to retreat into a

00:29:37 - 00:29:46

world of her own, and at 2 years, 9 months, we got a formal diagnosis of full syndrome autism. It

00:29:46 - 00:29:52

was a hopeless pessimistic future that was laid out in front of us. She was going to be disabled for

00:29:52 - 00:29:59

the rest of her life, likely to be non-vocal uh in an institution. Uh, and that the best thing we

00:29:59 - 00:30:06

could do was to accept the inevitable. Part of the story we heard from the Harvard experts was

00:30:06 - 00:30:14

autism was genetic. It was low and relatively constant prevalence. The more I learned, the more

00:30:14 - 00:30:20

clear was that that whole orthodox view was false, completely false. Revolutions only happen in

00:30:20 - 00:30:27

science when there is an anomaly. An anomaly that the old orthodoxy can't explain with autism, the

00:30:27 - 00:30:31

anomaly was the explosion in cases, which meant that what people were trying to describe as a

00:30:31 - 00:30:37

genetic neurologically based condition couldn't be genetic. It could only be environmental. It could

00:30:37 - 00:30:43

only be some set of things that had happened to children, and you had to ask the question, what

00:30:43 - 00:30:44

might it have been?

00:30:48 - 00:30:56

One of my uh personal training clients was the director of programs for LWT London Weekend

00:30:56 - 00:31:02

Television. And this guy said, why don't you do a program. And people out there may, there may be

00:31:02 - 00:31:07

someone out there with this condition. He said this is going to be an unbelievable story. We've got

00:31:07 - 00:31:12

nothing to lose right now. This child is either going to kill himself because he's gonna smash his

00:31:12 - 00:31:18

head to pieces, or we are gonna go insane because everybody here is miserable. That program was

00:31:18 - 00:31:27

aired and. We received 250,000 email hits. Computers were kind of new then, the whole internet

00:31:27 - 00:31:32

computer thing. Ours crashed. We'd set up a Billy Tommy website just in case somebody, one person

00:31:32 - 00:31:39

might be able to help us, crashed, the television station's computers crashed. They had never seen

00:31:39 - 00:31:46

anything like this before. The parents had exactly the same story as us. Antibiotics, some with

00:31:46 - 00:31:54

chickenpox, a lot, vaccine. Bang, the symptoms are all the same. The diarrhea, the constipation, the

00:31:54 - 00:31:59

hype, hitch, scream, the banging of the head. We've all lived through it. It's the same story. And

00:31:59 - 00:32:07

it was Polly's idea to put all of this stuff together in a magazine called Autism File. Let's all

00:32:07 - 00:32:14

ask the questions and maybe someone can help. These questions from these parents were not being

00:32:14 - 00:32:23

answered by the doctors that they went to see. They came to us out of desperation, and we had 45,000

00:32:23 - 00:32:25

subscribers within 4 months.

00:32:29 - 00:32:36

When I originally got the MMR Autism data, I came up with my own analysis plan and I stepped through

00:32:36 - 00:32:43

logically and systematically how the data should have been approached. I looked first of all at

00:32:43 - 00:32:52

males. Versus females, then I looked at black males. The relative risk of them receiving an autism

00:32:52 - 00:32:58

diagnosis was astronomical and it was highly statistically significant. I really had to scratch my

00:32:58 - 00:33:06

head and say I know nothing about the MMR vaccine and so that's when I originally called Andy. Wow,

00:33:08 - 00:33:14

really? After everything that had happened, everything we'd all been through, everything that the

00:33:14 - 00:33:22

families had suffered for the last 15 years, and the CDC had known all along there was this MMR

00:33:22 - 00:33:29

autism risk, as I started to divulge more of the conversations, and I think it really hit him that.

00:33:30 - 00:33:38

This was a major crack in the wall of the CDC. The first thing that Thomson did was to plot a graph,

00:33:38 - 00:33:47

a graph of percentage of children vaccinated against age at first MMR vaccination. The children with

00:33:47 - 00:33:52

autism are represented by the pink line, the children without autism by the blue line. Now, if

00:33:52 - 00:33:58

there's no link between early MMR and autism, those two lines should track together, whatever the

00:33:58 - 00:34:05

age at first MMR. And they do track together Until they get to 15 months, and then they separate and

00:34:05 - 00:34:12

they continue to separate thereafter. This was their first indication that MMR vaccine was causing

00:34:12 - 00:34:20

autism, and that finding alone rocked Thomson back on his heels. This was a huge issue for Andy. So

00:34:20 - 00:34:26

I said to Brian, Brian, are you recording these conversations? Recording phone conversations was not

00:34:26 - 00:34:33

really palatable to me. I almost seemed cruel. Whistleblowers can disappear as easily as they came.

00:34:33 - 00:34:38

They're like a fish on a hook, and your job is to get them into the boat.

00:34:44 - 00:34:49

Temple walked at 12 months, so he had been walking for an entire month before we went in for the

00:34:49 - 00:34:56

next set of vaccinations. The minute we walked into the pediatric office, Lou, his twin, she's

00:34:56 - 00:35:03

screaming her head off. I mean, she knows what's going on. She doesn't want the doctor touching her.

00:35:03 - 00:35:11

I look up and there she's got the shots. Lined up. 3 for him, 3 for her. By the second shot, Lucinda

00:35:11 - 00:35:18

had flipped herself over, so I had to stop looking at what I was doing, unstrap her, get her out.

00:35:18 - 00:35:24

But the minute I get her out and I calm her down a little bit and I look over, he's screaming. I

00:35:24 - 00:35:31

look at the shots and I noticed that one of hers was gone. There are only 2 shots left for her, and

00:35:31 - 00:35:37

I asked the, the nurse practitioner. I said, What happened to that other shot? She says, 00 my

00:35:37 - 00:35:44

goodness, I gave it to him. I said, which one was it? She said, it's the it was the other MMR. I

00:35:44 - 00:35:49

said, call the doctor. This baby is screaming his head off. You're giving him an extra shot. I don't

00:35:49 - 00:35:55

know what the effects of that's gonna be. We're leaving. And I left, so she never got her shots. I

00:35:55 - 00:36:01

go home, this baby cried, cried, cried. I put him down on his little blanket. He starts banging his

00:36:01 - 00:36:10

head on the floor, banging his head on the floor. Next morning I go in this room, And he's staring

00:36:10 - 00:36:18

in the in the space and he's looking around like this. As if, you know, he's a bit paralyzed, not

00:36:18 - 00:36:27

the baby who was always doing this every morning, smiling for me to get him out of bed. And I pick

00:36:27 - 00:36:35

him up and he does this. And I said, what has happened to my baby? So I call the clinic. And I said,

00:36:35 - 00:36:43

I think my child's had adverse reaction. To those those shots yesterday. She says, no, no, no, um,

00:36:43 - 00:36:47

I'm waiting for a representative from Merck. I don't think it was a reaction to that.

00:36:54 - 00:37:02

Bill Thompson looked at African Americans. He saw that those African Americans that got the MMR on

00:37:02 - 00:37:09

time were 2.64 times more likely to get an autism diagnosis than those African Americans that

00:37:09 - 00:37:15

received the MMR after three years of age. What this was suggesting is that among the blacks, the

00:37:15 - 00:37:22

ones that were getting vaccinated earlier, were more likely to have autism. At that point, the group

00:37:22 - 00:37:28

of researchers that was working on this particular study, they were having weekly meetings. Colleen

00:37:28 - 00:37:36

Boyle, who was the head of Developmental Disabilities branch in Marsal and Jurgen Allsop, who was

00:37:36 - 00:37:42

one of Thompson's direct supervisors, Frank DeStefano. Was the head of the immunization safety

00:37:42 - 00:37:49

office and then a postdoctoral research associate named Tanya Basin. In that meeting, Thompson

00:37:49 - 00:37:56

brought up the fact that African Americans were showing a, a highly statistically significant risk

00:37:56 - 00:38:03

of autism if they got the MMR on time. What what is said in these in these closed door meetings? I

00:38:03 - 00:38:09

mean, do people say, oh well this is unacceptable, or is it just, do they always say, oh this can't

00:38:09 - 00:38:17

be right, or I'm not going to lie, but I also don't want to say things to you right now that aren't.

00:38:19 - 00:38:30

That aren't some written form, right. The analysis regarding the African Americans was the 8 on the

00:38:30 - 00:38:38

Richter scale earthquake that just shook through the CDC. I take him to see the pediatrician that I

00:38:38 - 00:38:45

know. And she looks at me, she closes the door and she whispers, she says, Sheila, I believe he has

00:38:45 - 00:38:52

autism. I said, what? Like Rain Man? She says something like that. I'm gonna refer you out to a

00:38:52 - 00:39:00

neurologist and we go see the neurologist the next week. He says he has every classical symptom of

00:39:00 - 00:39:07

autism. I do not believe this. I was angry when he was explaining to me what Kana's autism is. He

00:39:07 - 00:39:13

told me he was born that way. I said no, he wasn't. Clearly there was a very high risk of autism in

00:39:13 - 00:39:19

African American children, but here's the thing, we know that autism is 4 times more common in boys,

00:39:19 - 00:39:25

and so to see that effect mirrored in the African American children was a compelling finding when I

00:39:25 - 00:39:33

looked at African American males only. The relative risk was 3.36%. It just blew my mind and that's

00:39:33 - 00:39:40

when I wanted to call Bill Thompson on the phone and his statement to me was, oh, you found it. It

00:39:40 - 00:39:47

appears in the final publication is that that race in general is downplayed. Of course it is.

00:39:59 - 00:40:10

Temple's twin is amazing. She is fluent in 3 languages. She speaks French like a native. She is an A

00:40:10 - 00:40:19

student. She plays classical piano. With all of the guilt that I feel from that day on the best

00:40:19 - 00:40:26

decisions I made for her. was to walk out of that office without her being vaccinated. At the end of

00:40:26 - 00:40:32

this journey, I don't want to be one of those mothers standing there saying what I wish I would have,

00:40:32 - 00:40:39

could have, should have done. I wanna be able to say I gave it everything that I had. I gave it my

00:40:39 - 00:40:47

best shot. His twin is going into 11th grade and for someone who still can't manage to cross the

00:40:47 - 00:40:58

street. Now am I grateful he's here? You bet. I'm grateful my son lived. So that was so naive that.

00:40:59 - 00:41:09

He would live a fulfilling life. He would end up being a happy man. Having a family. My dreams were

00:41:09 - 00:41:09

here.

00:41:12 - 00:41:23

And every year. That goes by the older my son gets. Further than dream seems to be.

00:41:27 - 00:41:33

vaccines. So what do vaccines do? Vaccines build up your immune system and make you stronger to

00:41:33 - 00:41:39

fight off disease. Are vaccines safe? Yes, studies involving millions of children have shown no

00:41:39 - 00:41:46

connection between vaccines and autism. Stick to the sketchy. The CDC's own vaccine schedule, which

00:41:46 - 00:41:52

we are required to adhere to as parents in America, recommends that our children get the MMR between

00:41:52 - 00:41:59

12 and 18 months. But in this hidden data provided to us by William Thompson, it is clear that for

00:41:59 - 00:42:06

African Americans this is actually the most dangerous time to deliver the MMR. The CDC in my opinion

00:42:06 - 00:42:11

is, is one of the, it's where I go to if I need information about an infectious disease. I, I

00:42:11 - 00:42:18

probably either go on their website or. Open one of the reference books every day. That building is

00:42:18 - 00:42:20

filled with a lot of scientists that are smarter than me.

00:42:31 - 00:42:38

The analysis plan is one of the most important parts of a scientific study. It's the the laws or the

00:42:38 - 00:42:44

rules by which the scientists will adhere to while doing the study, and this analysis plan is put

00:42:44 - 00:42:50

together by the scientists themselves. Sometimes their superiors weigh in, but once they've locked

00:42:50 - 00:42:56

that analysis plan, they've said this is how we're going to use the data. And you can't deviate from

00:42:56 - 00:43:03

that analysis plan or you're at risk of fraud, scientific fraud. Did they deviate from the analysis

00:43:03 - 00:43:11

plan after seeing something that they didn't like? If they did. We have a real problem. Thomson not

00:43:11 - 00:43:18

only played a major role in developing the analysis plan, he was the numbers guy. He was responsible

00:43:18 - 00:43:26

for collecting the data, analyzing the data, and presenting the results, and by November 2001, the

00:43:26 - 00:43:33

results were in. Now with the MMR Autism one, we had an analysis plan that we were supposed to

00:43:33 - 00:43:43

execute as was written. And You know, I'm going to be sharing these draft analysis plans that we

00:43:43 - 00:43:49

have, and you can see whether we did what we said we're going to do. That analysis plan had been

00:43:49 - 00:43:55

agreed upon not only by the co-authors but also CDC superiors. In order to conceal the effect of the

00:43:55 - 00:44:02

MMR, what they had to do was to reduce the number of children in the study in order to reduce what

00:44:02 - 00:44:08

is referred to as the. Statistical power, that is the ability of the study to detect the difference

00:44:08 - 00:44:14

if one genuinely exists. In the analysis plan, they had agreed to use two sources of information.

00:44:15 - 00:44:19

The first was the Children's school records, and the second was the Children's Georgia birth

00:44:19 - 00:44:24

certificate records. So while every child in the study had a school record, only half of the

00:44:24 - 00:44:28

children in the study had a Georgia birth certificate record because the other half had been born in

00:44:28 - 00:44:34

other states. So the analysis plan was explicit. Information on a child's race was to come from

00:44:34 - 00:44:39

their school record. But when confronted by data that revealed an increased risk of autism in

00:44:39 - 00:44:44

African American children, so they deviated from their analysis plan. They chose to get the race

00:44:44 - 00:44:50

data not from the school record, but from the Georgia birth certificate record. Instead of having

00:44:50 - 00:44:59

3000 individuals in the study, it went down to about 1800. The relative risk went down from 2.64 to

00:44:59 - 00:45:06

1.8, but more importantly, that relative risk was no longer statistically significant. I now ask you

00:45:06 - 00:45:10

to step forward to receive your prize from the hands of His Majesty the King.

00:45:16 - 00:45:23

I am Rick Montagnier, MD. I am a biologist by training. I obtained the Nobel Prize for my

00:45:23 - 00:45:32

contribution to the discovery of the AIDS virus. The vaccine autism. Interaction is a worldwide

00:45:32 - 00:45:40

problem not only in this country in Europe but also in Asia, even in Africa. The MR vaccination in a

00:45:40 - 00:45:49

very early stage of infancy before the age of 2 was more prominent in uh for for American children,

00:45:49 - 00:45:58

and this was hidden for some time. This fraud, of course, ranks very high, uh, to my opinion. Uh, in

00:45:58 - 00:46:06

the ethics of medicine and science, CDC in the past has done a very important work on the discovery

00:46:06 - 00:46:14

of AIDS, so I'm very disappointed to see a different situation with CDC and dealing with autism.

00:46:20 - 00:46:27

Shortly after, uh, Julie Gerardin became head of the CDC, I began to communicate with her and, and

00:46:27 - 00:46:33

ask her to come to my office. There didn't seem to be, uh, objective research going on. There was,

00:46:34 - 00:46:42

uh, the CDC trying to promote. Vaccination for children and then they were doing the safety research

00:46:42 - 00:46:49

themselves. In CDC's judgment, the best public policy is to continue vaccination unchanged while

00:46:49 - 00:46:55

aggressively working to try to identify causes of developmental disabilities. The CDC, I just

00:46:55 - 00:47:01

thought was institutionally conflicted. The CDC can't take money directly from Pharma, but they can

00:47:01 - 00:47:07

set up a foundation, and the foundation can attract donations from commercial interests and does.

00:47:07 - 00:47:14

Merck, GlaxoSmithKline, now Pfizer, Sanofi Aventis have huge multi-billion dollar vaccine businesses.

00:47:14 - 00:47:20

They're profitable. They've grown because some of these new high-tech vaccines that are patented,

00:47:21 - 00:47:29

that are high priced, get protected by this little cocoon of. Regulatory capture in HHS and and are

00:47:29 - 00:47:35

guaranteed multi-billion dollar franchises. When I was working at Merck, I was a sales rep for Vioxx.

00:47:35 - 00:47:41

The whole scandal started when it was discovered that Merck had manipulated data and covered up the

00:47:41 - 00:47:47

fact that Vioxx actually caused twice the amount of heart attacks and strokes than the placebo. What

00:47:47 - 00:47:52

I learned from that experience was just because things are on the market does not mean they are safe.

00:47:55 - 00:48:01

I think we get into a very dangerous territory with vaccinations. If a drug company gets just one

00:48:01 - 00:48:07

vaccine added to the schedule, they can make upwards of \$30 billion in one year. It's no secret. I

00:48:07 - 00:48:13

think they've published their intention, which is they want to create an environment of constant

00:48:13 - 00:48:20

vaccination from cradle to grave. They want infant vaccines, expanded flu shots, DTap boosters,

00:48:20 - 00:48:27

Gardasil shots, meningococcal shots. They want adult vaccines. They, they want you and me to come in

00:48:27 - 00:48:34

and get a constant barrage of shots, and then they. Vaccines for the elderly. We have a highly

00:48:34 - 00:48:40

profitable product because the safety testing isn't as rigorous as a normal pharmaceutical drug. The

00:48:40 - 00:48:48

gold standard is double blind, placebo-based long term study, and that just isn't done with vaccines

00:48:48 - 00:48:53

because they're classified in a different way as a public health measure, and they haven't been

00:48:53 - 00:49:00

tested in combination with other vaccines. Yet doctors give 6 to 9 doses per visit. It's insane. If

00:49:00 - 00:49:06

pharmaceutical drug was tested like this, it wouldn't be on the market, but because it's a vaccine

00:49:06 - 00:49:13

and the safety testing is less rigorous. Our children are being experimented on. I don't like to

00:49:13 - 00:49:18

look at autism from a behavioral perspective. I look at it from more of a what causes it in each

00:49:18 - 00:49:24

child. When I want to define autism, I have to say that it's the inability to detoxify the way

00:49:24 - 00:49:29

you're supposed to or at the rate that you're supposed to, and it all has to do with this toxic

00:49:29 - 00:49:36

overload. These children are not detoxifying. From the vaccinations, same thing with GMO products,

00:49:36 - 00:49:43

the pesticides in our food. If I can prevent the child from being exposed to more toxins, then when

00:49:43 - 00:49:49

I'm teaching the child, at least the child is getting better and not continuously getting worse.

00:49:49 - 00:49:52

Without a doubt, what's happened to Billy has changed his life.

00:49:57 - 00:50:04

Yeah, there you go, a strike. What I have on my hands now is a 19 year old man. He's 6'2. He is, um,

00:50:04 - 00:50:10

volatile. On good days, Billy is brilliant, he's an angel. On bad days, the slightest thing can

00:50:10 - 00:50:15

trigger him, and he's scary. I'm gonna go downstairs and get daddy. You need, you need to stay up

00:50:15 - 00:50:21

here, OK? I'm gonna kill Daddy right now. Bill, listen to me. I'm gonna stay with you up here and

00:50:21 - 00:50:28

you're gonna try and calm down, OK. The reason they become aggressive and dangerous in some cases is

00:50:28 - 00:50:36

because they have no ability to communicate. Because mummy asked Kent for Kent bringing the sweet

00:50:36 - 00:50:42

corn and then bringing the chickens here. Because this is your fault, mummy. If you were not able to

00:50:42 - 00:50:48

express your needs, your wants, your desires, your happiness and sadness and so on, you would become

00:50:48 - 00:50:52

aggressive. That's often when we see the worst part of autism.

00:50:59 - 00:51:06

We had to occupy his room and use his video player, and of course that is a massive intrusion in his

00:51:06 - 00:51:09

space, and he's he got very upset. Remember,

00:51:19 - 00:51:23

the stress level. There, there's millions of me, there's millions of polytommmies with vaccine

00:51:23 - 00:51:29

damaged children. I am telling you this because I do not want you to live the life that I've led. I

00:51:29 - 00:51:34

do not want you to go through the pain. I do not want to see you suffer or your family suffer. That

00:51:34 - 00:51:38

is why I'm telling you. I've no other reason to tell you about it. It's not my concern, my kid's

00:51:38 - 00:51:39

already damaged.

00:51:43 - 00:51:44

No. OK.

00:51:48 - 00:51:53

I am a senior research scientist here at MIT in the Computer Science and artificial intelligence

00:51:53 - 00:52:00

Laboratory. I have a bachelor's degree in biology from MIT and I have MSEE and PhD degrees also from

00:52:00 - 00:52:06

MIT in electrical engineering and computer science. I became interested in autism a long time ago

00:52:06 - 00:52:13

when my best friend at the time had a son who was diagnosed with autism following a DPT shot. He had

00:52:13 - 00:52:18

a high fever after the shot, seizures a week later, and then was later diagnosed with autism. We

00:52:18 - 00:52:25

have to accept the fact that autism is new, that before 1930, the rate of autism in the world was

00:52:25 - 00:52:31

effectively zero. And then for a long time it was 1 in 10,000. I got interested in studying autism

00:52:31 - 00:52:36

eight years ago when I saw the numbers go up and I was quite alarmed because I could see that the

00:52:36 - 00:52:43

trend was exponential growth. And exponential growth is extremely scary. Since really the mid to

00:52:43 - 00:52:50

late 80s, we've gone from this low prevalence environment to a rate of, of increase where the trend

00:52:50 - 00:52:55

is still vertical. We have not seen a flattening in trend. Every couple of years, the CDC provides a

00:52:55 - 00:52:59

number of what percentage of the kids are diagnosed with autism, and you've got the dots going all

00:52:59 - 00:53:06

the way back to 1975, you draw the line, it is a perfect exponential curve. If we assume that things

00:53:06 - 00:53:13

are going to continue. As they have for the past 30 years into the future, we can predict that by

00:53:13 - 00:53:21

2032, 80% of the boys born will end up on the autism spectrum. Half the children, 80% of the boys.

00:53:42 - 00:53:47

If you think this vaccine is only a problem for African American kids like me, you're wrong. There's

00:53:47 - 00:53:53

an even bigger problem, one that puts all kids at risk and it's called isolated autism.

00:54:01 - 00:54:07

When the CDC researchers set out to do the study, they asked themselves the question, if early MMR

00:54:07 - 00:54:15

vaccine causes autism, in which children would we be most likely to find this effect? Their answer

00:54:15 - 00:54:21

is children with no developmental concerns for the first year of life, Children who were perfectly

00:54:21 - 00:54:30

healthy until they received their MMR vaccine. They called this group isolated autism. Now this does

00:54:30 - 00:54:39

not refer to an isolated case of autism or an isolated group with autism. They isolated autism out.

00:54:39 - 00:54:48

These were children who had no comorbid conditions, apart from their autism. No cerebral palsy, no

00:54:48 - 00:54:56

mental retardation, no visual or hearing impairment, no epilepsy and no birth defects. This risk

00:54:56 - 00:55:06

group includes essentially every healthy child in the world. I'm a single father Raising a 15 year

00:55:06 - 00:55:15

old. Severely autistic, nonverbal teenage daughter. When she was 15 months old, she received a round

00:55:15 - 00:55:22

of vaccines that included the MMR and the DTA. She developed a high fever and the fever broke, she

00:55:22 - 00:55:28

lost everything. My daughter was 6 weeks old when I took her in for her vaccination. 2 hours later,

00:55:28 - 00:55:34

she had a 5 minute seizure, and 2 hours after that, she had another 5 minute seizure. Mom is here.

00:55:34 - 00:55:41

Come on, come on. Come on, you're OK. You're OK. Come on, baby. Come on, babe, come on, you can do

00:55:41 - 00:55:47

it. Come on, babe, come on now. Come on, come on baby, come on, keep breathing. Come on, come on,

00:55:47 - 00:55:51

come on, come on. The vaccination gave her severe brain damage, and she had seizures every day for

00:55:51 - 00:55:57

the rest of her life until she died in my arms at the age of 15. There is no good reason to choose

00:55:57 - 00:56:04

not to get a vaccine. He got his MMR and he got his DTP. And within days he stopped talking,

00:56:04 - 00:56:10

projectile vomiting, convulsions. He went blind in his left eye. Vaccines took our healthy, happy

00:56:10 - 00:56:18

baby. And made him unwell. She lost all acquired speech. He lost his speech. He lost his eye contact

00:56:18 - 00:56:23

like the flick of a switch. If vaccines were unsafe, I think this would be an interesting and

00:56:23 - 00:56:28

reasonable discussion. Obviously some minority get hurt by this stuff. I don't understand why this

00:56:28 - 00:56:35

is controversial. Vaccines are safe. Get vaccinated. It's like, you know what, shut the fuck up and

00:56:35 - 00:56:40

let me take every vaccine that Merck wants to shove down my throat. Autism is not a side effect of

00:56:40 - 00:56:45

vaccine, or to say it another way because some people don't want, don't hear this well. Vaccines do

00:56:45 - 00:56:52

not cause autism. Hear this well. Hear this well, please hear this well. Hear this well. Vaccines

00:56:52 - 00:56:58

can and do cause autism. My grandsoner Lily, when my daughter my son was fully vaccinated. My son

00:56:58 - 00:57:02

Jackson. I had a healthy, typically developing boy. Please hear this well.

00:57:05 - 00:57:11

One day everyone will know the truth about vaccines. Hear this well.

00:57:15 - 00:57:21

I actually think the most interesting results are the elevated ones for the isolated ones that don't

00:57:21 - 00:57:28

have other comorbid conditions. The effect is where you would think it would happen in isolated

00:57:28 - 00:57:36

autism. He saw a very, very strong effect. Specific to those kids that got the MMR on time when Bill

00:57:36 - 00:57:42

Thompson ran those numbers, he saw an astronomical effect. Some of the numbers were actually the

00:57:42 - 00:57:51

relative risks were as high as 7 or 8 times higher with these kids that were diagnosed with just

00:57:51 - 00:58:00

isolated autism, no other diagnosis versus those controls. Autism is confusing because it sounds

00:58:00 - 00:58:07

small, but it really is a big problem because all healthy children, no matter what race, are at risk.

00:58:08 - 00:58:15

For example, my sister's 18 months old and she's supposed to get her MMR shot right now. But if she

00:58:15 - 00:58:24

does, she's 7 times more likely to get autism than if my parents wait until after 3 years old. So I

00:58:24 - 00:58:31

hope my parents don't do it. Here's what's really scary when we look at isolated autism, we see that

00:58:31 - 00:58:37

there's up to 7-fold increase in the incidence of autism between those that received the vaccine

00:58:38 - 00:58:43

between 12 and 18 months versus those that got it after 3 years old. But let's be perfectly clear,

00:58:43 - 00:58:51

every child in the study had received the MMR vaccine. What would the numbers be if you compared

00:58:51 - 00:58:56

children who got the vaccine between 12 and 18 months versus children that never got the vaccine at

00:58:56 - 00:59:05

all? This is often referred to as the VAX versus unvax study, and the CDC refuses to do this study

00:59:05 - 00:59:11

even though every drug that we take has been through this exact study. There's a group who take the

00:59:11 - 00:59:15

drug and then they compare it with a group that do not take the drug and they see are there more

00:59:15 - 00:59:21

side effects and complications with the group that takes the drug. So why does the CDC refuse to do

00:59:21 - 00:59:28

the vax versus unvax study? Probably because when we look at the results of this study, we realized

00:59:28 - 00:59:34

that the risk would be astronomical and is likely to be one of the major reasons we're seeing this

00:59:34 - 00:59:38

skyrocketing increase of autism worldwide.

00:59:42 - 00:59:50

Just like the African American children, they went into the room and they sliced and diced the data

00:59:50 - 00:59:55

in an effort to get rid of that effect. This is Colleen Boyle's meeting notes, how they plan to

00:59:55 - 01:00:01

present the data by these age groups that after the fact when the data are in, she writes Reformat.

01:00:01 - 01:00:05

And then she puts in new age groups.

01:00:08 - 01:00:12

Even this failed to achieve the desired effect, since in the end, they simply omitted the relevant

01:00:12 - 01:00:19

findings from the paper altogether. I, I was just looking at that. I'm like, oh my God, I cannot

01:00:19 - 01:00:27

believe we did what we did, um, but we did. Yeah, so it's all there. It's all there. And you in the

01:00:27 - 01:00:33

health field, you who run our health agencies in this country who are sitting here today, you have

01:00:33 - 01:00:39

an obligation. To these kids that you just saw there to make sure that these studies are complete,

01:00:40 - 01:00:47

thorough. So that everybody knows that we have all the facts and you don't have that. One of the

01:00:47 - 01:00:53

things we did because this was such an important topic. was to have them be sworn in, so they were

01:00:53 - 01:00:59

under oath and if they were doctoring the results of a study and they did it deliberately, they

01:00:59 - 01:01:08

committed a felony. It used to be 1 in 10,000. And now it's 1 in more than 250 kids that are being

01:01:08 - 01:01:11

damaged in this country that are autistic.

01:01:13 - 01:01:18

Now those kids are gonna grow up. They aren't gonna die. It's not like a lot of diseases where they

01:01:18 - 01:01:24

get infected and they drop dead. They're gonna live to be 50, 60 years old. Now who do you think is

01:01:24 - 01:01:25

gonna take care of them?

01:01:27 - 01:01:33

It's gonna be us, all of us, the taxpayers, and it's going to cost, I think, as you said, Ms.

01:01:33 - 01:01:40

Maloney, trillions of dollars. So we can't let the pharmaceutical companies and our government cover

01:01:40 - 01:01:49

this mess up today because it ain't gonna go away and it's gonna cost the taxpayers trillions more

01:01:49 - 01:01:56

if we wait around on it and for our FDA and HHS and the health agencies to continue to hide behind

01:01:56 - 01:02:02

this facade that there have been studies that conclusively prove otherwise is just wrong too. So the

01:02:02 - 01:02:07

CDC wasn't just doing this study inside of a bubble. In fact, it was the exact opposite. They were

01:02:07 - 01:02:13

under fire. You had Congressman Dan Burton in front of the Congress demanding answers about mercury

01:02:13 - 01:02:20

and the MMR and vaccine studies and the connection to autism. Dave Weldon, congressman from Florida,

01:02:20 - 01:02:25

is reaching out to Julie Gerardin with serious complaints on how he thinks this entire issue is

01:02:25 - 01:02:31

being handled. On top of that, the Department of Justice is requesting files and data from the CDC

01:02:31 - 01:02:36

because of a previous study called the Verstratin study that had so many anomalies it looked like

01:02:36 - 01:02:41

scientific fraud was taking place, so they were suspicious. So then you look at the emails that

01:02:41 - 01:02:47

Thompson's provided to us. And you see that he's reaching out to his line manager, Doctor Melinda

01:02:47 - 01:02:54

Wharton, throwing up red flags saying, I first spoke with you in September of 2002 regarding the

01:02:54 - 01:03:00

sensitive results we have been struggling with in the MMR Autism study. How do you struggle with

01:03:00 - 01:03:09

scientific results? I mean, facts are facts. Data are data. That doesn't make any sense. So you've

01:03:09 - 01:03:14

got Dan Burton breathing down their necks. The Department of Justice is requesting files, and

01:03:14 - 01:03:21

William Thompson finds out that Colleen Boyle has brought in a lawyer to help her decide what

01:03:21 - 01:03:27

materials are too sensitive to provide to the Department of Justice. This obviously freaks William

01:03:27 - 01:03:33

Thompson out because later in the email to Wharton, he says, I will be hiring my own personal

01:03:33 - 01:03:38

attorney. And it's extremely unfortunate that we need to be concerned about whether our own legal

01:03:38 - 01:03:45

rights are covered when participating in a study such as this. Now what's going on here? We have

01:03:45 - 01:03:53

government scientists lawyering up over a children's safety study. Clearly this does not sit well at

01:03:53 - 01:03:59

all with Doctor Thompson because at the end of this email he makes what looks to me to be a clear

01:03:59 - 01:04:06

threat. My level of concern has also caused me to seriously consider removing myself as an author on

01:04:06 - 01:04:12

the draft manuscript. So then a few days later, Thompson writes directly to Doctor Walter Orenstein,

01:04:12 - 01:04:18

head of the National Immunization Program, saying, I am not interested in taking all of the

01:04:18 - 01:04:26

political heat that will go along with that study. Thompson has gone all the way to the top of his

01:04:26 - 01:04:33

department. I mean, we don't ever get a response from Walter Orenstein, but Thompson is very clear

01:04:34 - 01:04:35

on what happened next.

01:04:39 - 01:04:46

The higher ups wanted to do certain things, and I went along with it. In terms of chain of command.

01:04:46 - 01:04:52

I was number 4 out of 5. Dr. Thompson talked about destruction of documents and that in the fall of

01:04:52 - 01:04:58

2002. There was a meeting with the trash can rolled in, and they selected documents to be destroyed.

01:04:59 - 01:05:04

I led all the analyses with the Stefano saying literally everyone else got rid of all their

01:05:04 - 01:05:10

documents, so the only documents that exist right now from that study are mine. These documents were

01:05:10 - 01:05:15

not. Federal records. They were very important documents because they showed a very strong

01:05:15 - 01:05:19

statistically significant effect. He felt that quite rightly it would be illegal to destroy those

01:05:19 - 01:05:26

documents and so in his office he kept not only the hard copies but the computerized files for that

01:05:26 - 01:05:34

study. There was a dramatically different result presented before and after the time frame that

01:05:34 - 01:05:42

Thomson alleged that these data were destroyed. If I never had the documents before October 2002,

01:05:42 - 01:05:49

there would be nothing that would show that they actually had the results in hand, and they decided

01:05:49 - 01:05:55

to destroy those results. I filed a formal complaint to the Office of Research Integrity and

01:05:55 - 01:06:00

Department of Health and Human Services. I heard that not long after the complaint was filed, and

01:06:00 - 01:06:08

the letter basically stated that every co-author except for Doctor Thompson denied that any such

01:06:08 - 01:06:15

meeting was scheduled. They denied that any material was destroyed or thrown away. They were calling

01:06:15 - 01:06:21

Dr. Thompson a liar. It was their word against his. Doctor Thompson predicted that this would happen.

01:06:21 - 01:06:29

There's things I haven't even shared with you because. I can't prove it, and that's what I struggle

01:06:29 - 01:06:34

with. I don't want to share things with you that I can't prove that there aren't hard records

01:06:36 - 01:06:43

because I am worried that the other 4 people will collude and say no, that's not true. Dr. Thompson

01:06:44 - 01:06:50

provided meeting notes to me for precisely the time where the co-authors are claiming that no

01:06:50 - 01:06:57

meeting took place. That's what I keep seeing again. And again and again where the senior people

01:06:57 - 01:07:04

just do completely unethical vile things and no one holds them accountable. So look, once you have

01:07:04 - 01:07:11

the data, a scientific study like this is a relatively simple process. You just run the data, you

01:07:11 - 01:07:16

get the results, and then you publish those results in the paper in their own analysis plan, this

01:07:16 - 01:07:23

study was only supposed to take 6 months from May 2001 to December 2001. So if they weren't

01:07:23 - 01:07:31

destroying data, why did this study end up taking 4 years? The question everybody needs to be asking

01:07:31 - 01:07:41

the CDC is what the heck happened between October 2002 and February of 2004. The reason you don't

01:07:41 - 01:07:48

see anything else circulating on the study, it was 5 of us behind closed doors for two years. Wow.

01:07:50 - 01:07:56

So after 2 years of secret meetings behind closed doors, DeStefano emerges with the final draft of

01:07:56 - 01:08:03

the MMR study, and they're gonna present it to the Institute of Medicine. People on the IOM move

01:08:03 - 01:08:11

from industry, government, academia, government, industry, and they then they bounce around. It's

01:08:11 - 01:08:18

all the same. People and there wasn't a really good policeman in all this to really make sure that

01:08:18 - 01:08:23

the vaccine safety studies are done properly and that they're done objectively. It just didn't seem

01:08:23 - 01:08:30

to me like we were we were running a system that was credible. I had written to Julie Gerarding and

01:08:30 - 01:08:36

I asked her to postpone the February 9th Institute of Medicine meeting. This report, the Institute

01:08:36 - 01:08:43

of Medicine report I wanted postponed because of my concern. That this was not an exercise in

01:08:43 - 01:08:50

discovering the truth but was instead a meeting being driven by a desire to short circuit important

01:08:50 - 01:08:56

research and draw premature conclusions. The problem is William Thompson being the lead scientist,

01:08:56 - 01:09:03

he. Going to have to present their findings and he's not happy about it. In fact, he's so upset that

01:09:03 - 01:09:10

he goes above the lead author Di Stefano, above Walter Orenstein, all the way to the head of the CDC,

01:09:11 - 01:09:18

Doctor Julie Gerbig. And in an email he says, dear Doctor Gerbinin, I will have to present several

01:09:18 - 01:09:25

problematic results relating to statistical associations between the receipt of MMR vaccine and

01:09:25 - 01:09:32

autism. Basically saying I'm not gonna continue this lie. If you put me up there, I'm going to tell

01:09:32 - 01:09:40

the truth. Thompson was originally scheduled to provide a briefing because he basically told

01:09:40 - 01:09:46

Director Gerarding that he would have to say that there is. A causal association. He was switched at

01:09:46 - 01:09:53

the last minute with Frank DeStefano and was able to report to the IOM falsely. We have found no

01:09:53 - 01:10:01

association between MMR and autism. The IOM was the point of no return, and so deprived of the truth,

01:10:01 - 01:10:09

the IOM declared MMR vaccines safe. It was a rush to judgment to shut the door permanently and

01:10:09 - 01:10:17

completely on the. MMR Autism link, it's absolutely appalling that much of what I said turned out.

01:10:18 - 01:10:24

Exactly to be true, they were trying to short circuit the research. It's the lowest, you know, it's

01:10:24 - 01:10:29

the lowest point in my career that I went along with that paper. After their brilliant work on the

01:10:29 - 01:10:35

MMR study, DeStefano and his team received an award from the Department of Health and Human Services,

01:10:35 - 01:10:42

and then several years later, Doctor Julie Gerberding received an award of her own, a high paid job

01:10:42 - 01:10:49

as head of the vaccine division at Merck. Clearly, Merck appreciated the work she had done

01:10:50 - 01:10:51

investigating their vaccine.

01:10:56 - 01:11:06

Just to let you know, um, I wrote a paper on my results on MMR. Yeah. And it will include something

01:11:06 - 01:11:12

that I got from you. Brian was about to publish a paper using data that could only have come from an

01:11:12 - 01:11:18

inside source at the CDC, a whistleblower, and from that point forward, William Thomson was a marked

01:11:18 - 01:11:27

man. Andy approached me. And said it's time to publicize the CDC whistleblower. Ironically, 12 years

01:11:27 - 01:11:34

later, while Thompson is baring his soul to Brian Hooker in front of Congress, Colleen Boyle is just

01:11:34 - 01:11:40

peddling the same old CDC fraud, but this time it's to a new player, and that's Congressman Bill

01:11:40 - 01:11:48

Posey from Florida. I wonder if the CDC has conducted or facilitated a study comparing vaccinated

01:11:48 - 01:11:53

children with unvaccinated children yet. Have you done that? We have actually done a number of

01:11:53 - 01:11:59

studies looking at the relationship between thimerosal vaccines and autism and other developmental

01:11:59 - 01:12:06

disabilities. The lies from the CDC were still the same. The difference now is we had William

01:12:06 - 01:12:12

Thompson. Vaccines and their components did not increase the risk for autism. My time is very

01:12:12 - 01:12:20

limited here, so clearly, definitely. Unequivocally, you have studied vaccinated first unvaccinated.

01:12:21 - 01:12:28

We have not studied vaccinated versus unvaccinated. Never mind. That was the meaning of my question.

01:12:28 - 01:12:34

You wasted two minutes of my time. Brian had also submitted a related paper to a journal called

01:12:34 - 01:12:40

Nature Neuroscience, and in that paper he had specifically referred to an unnamed source at the CDC.

01:12:40 - 01:12:46

And my worst fears were realized when a journalist from Nature Neuroscience contacted the CDC,

01:12:46 - 01:12:51

contacted Walter Orenstein, the message went on to Frank DeStefano, who sent it out to the

01:12:51 - 01:12:58

co-authors saying, keep your heads down, this may be coming your way. The fear was all of a sudden

01:12:58 - 01:13:04

we'd be dredging a river for Bill Thompson. So I said to him, Brian, we've got to do 3 things. We

01:13:04 - 01:13:10

have got to get Thompson a whistleblower lawyer. We've got to make sure that his documents are with

01:13:10 - 01:13:18

Posey, and we've got to reveal his name. Whistleblowers are in danger only as long as the only

01:13:18 - 01:13:21

people who know their identity are their enemies.

01:13:25 - 01:13:33

Do vaccines cause autism? In the last 30 years, the childhood vaccine schedule has tripled, while

01:13:33 - 01:13:42

the US autism rate has skyrocketed from 1 in 10,000 to 1 in 50. Dozens of published research papers

01:13:42 - 01:13:51

show that, yes, vaccines and autism are linked. Yet the debate rages on in part because of the 1986

01:13:51 - 01:13:58

National Childhood Vaccine Injury Act passed by Congress as a result of pharmaceutical lobbying. It

01:13:58 - 01:14:03

shields drug companies from liability for injuries and deaths caused by the vaccines they

01:14:03 - 01:14:11

manufacture, vaccines that the federal government admits are unavoidably unsafe. Instead of suing

01:14:11 - 01:14:16

the pharmaceutical company directly, parents are forced to petition the Department of Health and

01:14:16 - 01:14:22

Human Services, and if federal health officials oppose compensation, the case is argued before a

01:14:22 - 01:14:29

special master in the US Claims Court. Many refer to this as vaccine court. Here are some shocking

01:14:29 - 01:14:36

facts about the so-called vaccine court. Pharmaceutical companies do not have to participate in the

01:14:36 - 01:14:44

proceedings at all. Taxpayers pay for all damages. The US Department of Justice acts as the

01:14:44 - 01:14:48

government's lawyer with taxpayers footing the bill for their defense.

01:14:53 - 01:15:01

Beginning in 2002, there were already thousands of cases accumulating in vaccine court, and the

01:15:01 - 01:15:07

average compensation for an autistic child is in the range of \$5 million. So just do the math. The

01:15:07 - 01:15:14

government was facing several \$100 billion possibly \$1 trillion in liability as the autism epidemic

01:15:14 - 01:15:21

grew. They had to develop a fraudulent study that would exonerate MMR to deliberately defeat the

01:15:21 - 01:15:28

cases in vaccine court. To avoid paying the trillion dollars, so the thousands of autism petitioners

01:15:28 - 01:15:36

were denied their fair day in court by a corrupt and deliberate obstruction of justice. It is it is

01:15:36 - 01:15:43

one of the most unethical medical decisions of all time because it was made with knowledge to

01:15:43 - 01:15:49

sacrifice these children as a direct affront to the congressional mandate that they all be

01:15:49 - 01:15:50

compensated.

01:16:03 - 01:16:08

In the fall of last year I got a call from an inside source who told me that in 2 weeks there's

01:16:08 - 01:16:14

gonna be a whistleblower from the CDC who's going to come out and say that the CDC had committed

01:16:14 - 01:16:22

fraud on the MMR study and that they knew that vaccines were actually causing autism. I mean, that's

01:16:22 - 01:16:28

a huge story. Unfortunately it was a story I would not be able to tell on a medical talk show

01:16:28 - 01:16:32

because a lot of our funding was coming from the pharmaceutical industry and we were also very good

01:16:32 - 01:16:39

friends with the CDC who had appeared on our show many, many times, but I knew that once this story

01:16:39 - 01:16:45

broke two weeks later that the mainstream news media would pick it up. Fox would be on it. CNN would

01:16:45 - 01:16:53

be on MSNBC we're talking about the biggest medical story in the last decade or two at least. So

01:16:53 - 01:16:58

that 2 weeks came. I saw the video that was posted by Andrew Wakefield and Brian Hooker, and I heard

01:16:58 - 01:17:06

the words of William Thompson and his confession. Oh my God, I cannot believe we did what we did. Um,

01:17:06 - 01:17:15

but we did. It's all there. It's all there. And I watched the blogosphere go crazy tweets, Facebook,

01:17:15 - 01:17:23

social media, everybody talking about it, but not one mainstream media source went anywhere near the

01:17:23 - 01:17:31

story. In fact, on CNN someone put the story up on iReport and CNN took it down. And in that moment

01:17:31 - 01:17:39

I realized. Wait a minute. Not only is my medical talk show being produced by the pharmaceutical

01:17:39 - 01:17:48

industry, all of television is. We were never going to get this story. But we certainly did get a

01:17:48 - 01:17:55

story. A highly contagious measles outbreak, major outbreak, measles outbreaks, measles on the march

01:17:55 - 01:18:02

in America. This outbreak is showing no signs of letting up. But in 2014, the number tripled to 644

01:18:02 - 01:18:12

measles cases reported in 27 states. It's really amazing to consider the. Of cases of autism every

01:18:12 - 01:18:18

year and to contrast that to let's say the number of children who acquired measles by going to

01:18:18 - 01:18:27

Disneyland. It's a tiny number of children who acquired measles, and it's a vast number of children

01:18:27 - 01:18:29

who are being diagnosed with autism every day.

01:18:32 - 01:18:37

We don't know what causes autism. I mean, that's fair to say. We're not sure as the scientific

01:18:37 - 01:18:44

community what causes autism, but we know that vaccines do not. No, I'm not saying that
Sanjay Gupta

01:18:44 - 01:18:51

is a bad guy. In fact, I think that he tries to do a lot of good. Just like many doctors do, but if

01:18:51 - 01:18:57

they're being lied to by the scientific body that provides them with their information. What happens

01:18:57 - 01:19:05

to all of us? What happens if a good doctor sees the same data that I saw? So you're, you're a

01:19:05 - 01:19:10

scientist basically, so you're studying this and you feel 100% comfortable. You even said you have

01:19:10 - 01:19:15

kids, so you're, you're a family person. You would feel very. How long have you been a doctor and

01:19:15 - 01:19:21

sort of what's your area of specialty? Sure, I've been a family medicine physician for over 10 years

01:19:21 - 01:19:27

now and treating families, everyone from newborns all the way up to my oldest patient is 96. So do

01:19:27 - 01:19:33

you administer vaccines as part of that? Yes, I do administer vaccines in our clinic we follow the

01:19:33 - 01:19:40

CDC recommendations and we give that information to our patients and we give them a schedule of when

01:19:40 - 01:19:44

their children are gonna need to be vaccinated and so on and so forth. There's something I wanna

01:19:44 - 01:19:50

show you. This is the formal complaint about what they've been given by William Thompson, the

01:19:50 - 01:19:54

whistleblower at the CDC, OK? There's all sorts of reference materials in here and things like that.

01:19:55 - 01:20:02

I'm just gonna give you time to. Look at it, study it as long as you want, OK? When you feel like

01:20:02 - 01:20:05

you have a grasp of it, it's gonna, you're gonna, I know it's gonna take some time. I appreciate you

01:20:05 - 01:20:07

taking the time. All right, OK.

01:20:10 - 01:20:17

So I have sent you what William Thompson has said is the fraud at the CDC, all of that data that was

01:20:17 - 01:20:26

missing. Did you get a chance to really look it over? It's uh it's really unbelievable how blatantly.

01:20:27 - 01:20:34

The data was switched around. It made me question whether or not this organization that's been

01:20:34 - 01:20:40

mandating how I practice medicine for the past 10 years if they're lying about this or leaving data

01:20:40 - 01:20:46

out about this particular study, what else am I being lied to about?

01:20:49 - 01:20:57

I'm still trying to digest it because this study. Which was used to kind of give the definitive

01:20:57 - 01:21:04

answer to us pediatricians that oh the MMR is not related to autism. I, I kinda feel like I've been

01:21:04 - 01:21:11

lied to when they set out to do the study they wanted to look at the data and interpret the data but

01:21:11 - 01:21:19

then there's a piece of data that they chose to ignore the data they excluded. It was really, really

01:21:19 - 01:21:26

significant. Think about it, it's a big deal. It is a big deal for a physician to have to deal with

01:21:26 - 01:21:34

the fact that for the past 1020 years we've been potentially. Destroying the brains of children.

01:21:34 - 01:21:42

Everything I've been telling my patients for the last 10 years. Has been based on a lie and a cover

01:21:42 - 01:21:48

up. Parents making decisions about their children's health deserve to have the best information

01:21:48 - 01:21:54

available to them. They should be able to count on federal agencies to tell them the truth. Once

01:21:54 - 01:21:59

Brian and I had outed Bill Thompson, he got himself a whistleblower lawyer. He provided all of his

01:21:59 - 01:22:04

documents on the fraudulent CDC study to Congressman Posey, who then went before the Congress.

01:22:04 - 01:22:10

Considering the nature of the whistleblower's documents as well as the involvement of the CDC, a

01:22:10 - 01:22:17

hearing and a thorough investigation is warranted. Uh, so I ask, uh, Mr. Speaker, I, I beg, I

01:22:17 - 01:22:23

implore, uh, my colleagues on the appropriations committees to please, please take such action. Uh,

01:22:23 - 01:22:29

thank you, Mr. Speaker. I yield back. It's now been 7 months since Congressman Bill Posey urged the

01:22:29 - 01:22:35

Congress to subpoena Bill Thompson, and they have done nothing. Bill Thompson wants to be subpoenaed

01:22:35 - 01:22:44

by Congress. As a CDC employee from the federal government, he cannot speak voluntarily because of

01:22:44 - 01:22:50

the threat of jail time. Absolutely William Thompson needs to go before Congress. He needs to go

01:22:50 - 01:22:57

before the whole nation. Everybody needs to see what he has to say. He needs to be deposed in in

01:22:57 - 01:23:03

front of a committee in Congress, and Julie Gerarding has to be brought in and and deposed because

01:23:03 - 01:23:09

this is a very, very, very disturbing revelation for this researcher to come forward and be saying

01:23:09 - 01:23:16

now that they were indeed deliberately. Uh, concealing critical information about an MMR Autism,

01:23:16 - 01:23:24

horrible, horrible, uh, development. Deviation from an analysis plan. A mission of crucial data.

01:23:25 - 01:23:34

Destruction of documents, obstruction of justice, misleading the Congress, grievous harm to innocent

01:23:34 - 01:23:40

children. This has to be investigated. You and I are in agreement. Vaccine safety should not be in

01:23:40 - 01:23:46

the CDC. Absolutely you would end up with an agency like the National Transportation Safety Board.

01:23:47 - 01:23:52

The next thing they need to do is they need to somebody needs to reintroduce the Weldon Maloney bill.

01:23:52 - 01:23:58

It needs to be very, very quickly enacted, and you need to take all of the vaccine safety

01:23:58 - 01:24:05

responsibilities out of the CDC. These children have been maimed by the actions of Colleen Boyle.

01:24:05 - 01:24:13

Frank DeStefano, Marceline Jurgen Allsop, and Tanya Basin. My son has been debilitated for 17 years.

01:24:13 - 01:24:21

I think jail time is too good for these individuals who have perpetrated such fraud. The notion of

01:24:21 - 01:24:29

vaccinating children, protecting children against serious infectious disease with vaccines that are

01:24:29 - 01:24:37

safe and effective. is laudable. You hear about measles outbreaks in Disneyland and then they try

01:24:37 - 01:24:44

and sell you MMR. We didn't see autism being reported as a consequence of the single vaccine, only

01:24:44 - 01:24:51

of the triple vaccine. So my feeling is that we need to review vaccination policy across the board.

01:24:51 - 01:24:58

But in the first instance, I do believe we can make the problem far less if we separate those

01:24:58 - 01:25:06

vaccines out. Into their single measles, mumps, and rubella. I just cannot imagine what it will be

01:25:06 - 01:25:11

like if we really do face a future in which half the children born end up on the autism spectrum. I

01:25:11 - 01:25:16

mean, it will be so disruptive of the school system. There'll be so little money to be able to spend

01:25:16 - 01:25:20

on the on the normal children to help them, to bring them up and to educate them. We're just going

01:25:20 - 01:25:28

to have extremely sick children and parents that will be so distracted by. By the challenge of

01:25:28 - 01:25:33

bringing up these these children that are so sick that our society will not be able to focus on

01:25:33 - 01:25:38

anything else. The implications of that for our country, for our competitiveness as a nation, for

01:25:38 - 01:25:46

our economy, are massive. They must know, and they do know that there's a national emergency. I mean

01:25:46 - 01:25:49

this is going to be a complete catastrophe if we just let it happen.

01:25:52 - 01:25:59

What will you say? The next time a mother sitting there with her baby in their hands, says Doctor

01:25:59 - 01:26:03

Rachel, is the MMR vaccine safe?

01:26:05 - 01:26:12

I'm gonna tell her I'm gonna say, you know, honestly, I'm not gonna give the MMR vaccine to my

01:26:12 - 01:26:14

babies and here's why.
